DESTROYED IN 2018

**NONE
REPORTED**

CURRENT LIKELIHOOD OF MEETING 2025 CLEARANCE TARGET (as per Maputo +15 Political Declaration aspiration): **LOW**

KEY DEVELOPMENTS

Eritrea's Anti-Personnel Mine Ban Convention (APMBC) Article 5 deadline expires on 1 February 2020. As at July 2019, it had not indicated whether it would submit a request to again extend its Article 5 deadline. It was the only state party with a deadline in 2020 which failed to acknowledge its upcoming deadline or report on plans for an extension.

Eritrea is failing to comply with its obligation under Article 5 of the APMBC to complete clearance as soon as possible. There is no indication of any progress in mine action since the end of 2013. Eritrea failed to submit an updated Article 5 workplan as required by states parties upon granting its second extension and did not respond to repeated requests for updated information from Mine Action Review in 2019. It last submitted an Article 7 transparency report in 2014, in and of itself a violation of the Convention.

RECOMMENDATIONS FOR ACTION

- Eritrea needs to return to compliance with its obligations under the APMBC. The authorities should ensure that mine survey and clearance are undertaken for humanitarian and developmental purposes as a matter of urgency.
- Eritrea should urgently submit an extension request for its Article 5 deadline, which includes an up-to-date list of all known or suspected areas with anti-personnel mines and a detailed timeline of activities planned for the extension period sought.
- Eritrea must urgently submit its outstanding annual Article 7 transparency reports, the latest of which was due by 30 April 2019.
- Eritrea should reconsider its policy of excluding international technical assistance in mine action, which would support efficient land release and re-open international funding paths.
- Eritrea should cooperate in cross-border mine action activities with Ethiopia, including as part of recent efforts towards a peace agreement with its neighbour.
- Eritrea should develop and make public a resource mobilisation strategy on the basis of a clear understanding of remaining contamination.

ASSESSMENT OF NATIONAL PROGRAMME PERFORMANCE

Criterion	Score (2018)	Performance Commentary
UNDERSTANDING OF CONTAMINATION (20% of overall score)	4	The last estimate of mine contamination in Eritrea dates back to the end of 2013, when Eritrea reported that 434 mined areas remained with a size of 33.4km ² . All area is reportedly suspected hazardous area. Mine Action Review is unaware of any indication of progress in land release or updated information on the extent of contamination since this time.
NATIONAL OWNERSHIP & PROGRAMME MANAGEMENT (10% of overall score)	4	Eritrea's mine action programme is entirely nationally managed. The Eritrean Demining Agency (EDA) is responsible for mine clearance.
GENDER (10% of overall score)	3	It is not known if Eritrea has policies in place relating to gender and mine action.
INFORMATION MANAGEMENT & REPORTING (10% of overall score)	1	Details on Eritrea's current information management system are not known. However, its lack of submissions of Article 7 reports over the past five years is a violation of the Convention. It has failed to provide any updates on the status of its mine action obligations in recent years.
PLANNING AND TASKING (10% of overall score)	1	Recent details on Eritrea's planning and tasking system are not available.
LAND RELEASE SYSTEM (20% of overall score)	4	Eritrea is reported to have National Mine Action Standards dating back to 2012. The EDA was responsible for the implementation of quality management activities.
LAND RELEASE OUTPUTS AND ARTICLE 5 COMPLIANCE (20% of overall score)	1	Eritrea has made little, if any, progress at all in land release to meet its obligations under its second Article 5 extension request. In 2014, Eritrea reported that it expected to require a third extension, but, as at July 2019, it had taken no apparent steps towards requesting one. It remains in violation of the Convention for failing to complete mine survey and clearance as soon as possible, and for not respecting other procedural provisions of the Convention.
Average Score	2.7	Overall Programme Performance: VERY POOR

- None

UNDERSTANDING OF AP MINE CONTAMINATION

Eritrea is affected by mines and explosive remnants of war (ERW) dating back to World War II, but largely as the result of the struggle for independence in 1962–91 and its armed conflict with Ethiopia in 1998–2000.

In May 2015, in response to Mine Action Review's request for updated information on the state of contamination and mine action activities in Eritrea, the Deputy General Manager of the Eritrea Demining Agency (EDA) reported "no significant progress registered by the EDA currently". He claimed, though, that the EDA was being reorganised in an effort to make "better progress".¹ Since 2015, the EDA has not responded to repeated requests from Mine Action Review for further information, most recently in the first half of 2019.

The last estimate of mine contamination in Eritrea dates back to the end of 2013, when Eritrea reported 434 mined areas covering an estimated 33.4km². This was a two-thirds reduction on the earlier estimate of 99km² of June 2011,² and significantly lower than the 129km² identified by the 2004 landmine impact survey.⁴

Table 1: Mined area by region (at end 2013)⁵

Zoba (region)	SHAs	Estimated area (m ²)
Semienawi Keih Bahri	166	9,462,537
Anseba	144	10,230,940
Gash Barka	63	6,252,951
Debul	29	3,894,036
Maakel	24	2,423,325
Debulawi Keih Bahri	8	1,169,029
Totals	434	33,432,818

SHA = suspected hazardous area

NATIONAL OWNERSHIP AND PROGRAMME MANAGEMENT

The Eritrea mine action programme is entirely nationally managed. The EDA, established in July 2002, is responsible for policy development, regulation of mine action, and the conduct of mine clearance operations. The EDA reports directly to the Office of the President.

Eritrea projected that costs for its current Article 5 extension period would amount to more than US\$7 million, all to be raised nationally.⁶ In 2011–13, Eritrea managed to raise only \$257,000 annually. Eritrea acknowledged at the time that its progress in clearing mines would be slow due to its lack of resources, but it has never been clear how Eritrea intended to secure the funding necessary for its survey and clearance activities, particularly in light of its regrettable policy not to accept international technical assistance.⁷

GENDER

Eritrea did not respond to Mine Action Review's inquiries in 2019 about the national mine action programme's policies relating to gender.

INFORMATION MANAGEMENT AND REPORTING

Details on Eritrea's current information management system are not known. However, its lack of submissions of Article 7 reporting over the past five years is a violation of the Convention. It has also failed to provide an updated Article 5 workplan or any updates on the status of demining in recent years.

PLANNING AND TASKING

There is no apparent recent information on how Eritrea plans its demining operations. Re-survey during the second extension period was planned to involve both technical and non-technical survey of all remaining mined areas across six regions, and to run concurrently with clearance in priority areas in the Anseba, Maakel, and Semienawi Keih Bahri regions.⁸

LAND RELEASE SYSTEM

STANDARDS AND LAND RELEASE EFFICIENCY

Eritrea reportedly has National Mine Action Standards that date back at least to 2012. It is not known if any updates to the standards have been made in the seven years since. It was reported that the EDA was responsible for the implementation of quality assurance (QA) and quality control (QC) activities.⁹

OPERATORS

In the past, demining has been primarily conducted by the engineering units of the Eritrean defence forces under the supervision of the EDA.¹⁰ According to its second Article 5 deadline extension request, Eritrea planned to deploy “at least” five demining teams during its second extension period.¹¹

Following expulsion of international non-governmental organisations (NGOs) in 2005, the authorities do not allow international operators to conduct survey or clearance in Eritrea.

LAND RELEASE OUTPUTS AND ARTICLE 5 COMPLIANCE

Under its 2014 extension request, Eritrea projected that up to 15.4km² of mined area could be cleared within five years. It reported that 67.3km² of contaminated area had been cancelled through non-technical survey and that 5.7km² was cleared over 38 mined areas in 2011–13.¹²

Eritrea has not provided any updates to states parties to the APMBC, nor responded to Mine Action Review requests for information on any mine action activities (including survey) undertaken in since 2014. In 2013, Eritrea had reported release of 157 SHAs totalling 33.5km², leaving 385 mined areas of close to 24.5km² to be surveyed.¹³ Forty-nine new

mined areas with a total size of 9km² were discovered in five of the country's six regions during non-technical survey in 2013: Anseba, Debub, Gash Barka, Maakel, and Semienawi Keih Bahri.¹⁴

Likewise, Eritrea has not made public any information on any mine clearance undertaken in 2018 or recent years. In 2013, Eritrea seemingly cleared approx. 2.26km² of mined area, almost twice the amount cleared in 2012 (1.2km²).¹⁵ The number of anti-personnel and anti-vehicle mines destroyed in 2013 was not reported.

LAND RELEASE OUTPUTS IN 2018

As stated, no land release output, including survey or clearance, was reported in 2018.

ARTICLE 5 DEADLINE AND COMPLIANCE

Table 2: Five-year summary of AP mine clearance (2014–18)*

Year	Area cleared (m ²)
2018	N/R
2017	N/R
2016	N/R
2015	N/R
2014	N/R
Total	N/R

* N/R = Not Reported

Under Article 5 of the APMBBC (and in accordance with the three-year extension granted by states parties in 2011 and a further five-year extension granted in 2014), Eritrea is required to destroy all anti-personnel mines in mined areas under its jurisdiction or control as soon as possible, but not later than 1 February 2020. It is not on track to meet this deadline, is failing to comply with its Article 5 obligations, and as at August 2019 had not submitted a request for an extension to its Article 5 deadline. If Eritrea fails to submit an Article 5 extension for consideration and approval by states parties at the Fourth APMBBC Review Conference in November 2019, it will be in serious violation of Article 5 as of its Article 5 deadline of 1 February 2020.

In January 2014, Eritrea submitted a second Article 5 deadline extension request seeking a further five years to continue clearance and complete re-survey of SHAs, but not to fulfil its clearance obligations under the treaty. In June 2014, however, states parties granted Eritrea its extension request until 2020, but noted that five additional years beyond Eritrea's previous February 2015 deadline "appeared to be a long period of time to meet this objective".¹⁶

Based on a predicted clearance rate of 0.384km² per team per year and 1.92km² per five teams per year, Eritrea estimated that five teams operating at this pace could clear almost 15.4km² in the five-year period.¹⁷ It acknowledged, though, that this was "ambitious" and the amount projected still accounted for less than half of the total area Eritrea estimated as requiring either clearance or re-survey (33.5km²), leaving some 18km² unaccounted for.¹⁸

In April 2014, at the APMBBC Intersessional Meetings, Eritrea stated that the extension period was designed to gain greater clarity about its mine problem, at which point Eritrea "could plan and think about the financial resources to be allocated for mine action".¹⁹ It was further stated that Eritrea "won't complete clearance in the next five years", and will likely require a third extension.²⁰ Eritrea has not provided states parties with any information since, nor did it submit an updated Article 5 deadline extension request workplan as requested. It did not attend any meetings of the APMBBC in 2018 or the first half of 2019. As at August 2019, Eritrea was in clear violation of the Convention, both substantively and procedurally, and had yet to submit an extension request to its Article 5 deadline of 1 February 2020.
